Business Context & Objectives

Building a Measurable Lead Generation Engine for MNF.ai, an AI-powered SaaS platform for filmmakers and screenwriters, using Meta Ads to build awareness, drive landing-page traffic, generate workshop registrations and identify qualified prospects across India and US markets.

STARTING CHALLENGE & CORE CONTEXT

Unlike Search, where users actively express intent through queries, Meta required a different approach: identifying relevant audience segments, communicating the value proposition through creative, and progressively learning which combinations generated meaningful engagement and qualified leads.

The Core Question: Which audiences respond to the proposition, which creative messages generate meaningful engagement, and which of those interactions ultimately translate into registrations and qualified leads?

Strategic Objectives

- Reach relevant filmmaker and screenwriter audiences across India and US markets.
- Test audience and creative combinations to identify stronger-performing segments.
- Drive qualified traffic to relevant landing experiences.
- Generate workshop registrations and leads.
- Move beyond surface-level engagement metrics toward lead quality.
- Use campaign and funnel signals to progressively improve targeting, creative and budget allocation.

CORE OPERATING PRINCIPLE

"On Meta, the audience gets the impression — but the creative earns the attention."

Campaign Scope: One Meta Acquisition Ecosystem

Meta Ads operated as a full-funnel acquisition layer, connecting audience targeting, creative, landing-page behaviour, registrations and lead qualification rather than treating each metric independently.

01 — AUDIENCE DISCOVERY

Identified and tested relevant audience segments around filmmaking, screenwriting and related interests to understand where meaningful engagement was emerging.

Focus: Audience relevance · Reach · Engagement · Traffic quality

02 — CREATIVE & MESSAGE TESTING

Used creative and messaging to communicate the value proposition and capture attention within a feed-based environment.

Focus: Creative relevance · CTR · Engagement · Landing-page response

03 — LANDING-PAGE ACQUISITION

Directed engaged users toward relevant landing experiences and measured the progression from link click to landing-page view and registration.

Focus: Link clicks · Landing-page views · Conversion rate

04 — LEAD & REGISTRATION GENERATION

Campaigns were evaluated beyond traffic generation by measuring workshop registrations and qualified leads.

Strongest Evidence: 790+ workshop registrations · 275+ qualified leads

Measurement Note: Campaign scope and performance figures are based on available platform records. Channel-specific results are presented only where supported by available quantitative evidence.

Meta Strategy: Audience → Creative → Conversion

Meta does not provide the same explicit search intent available through Google Search. The strategy therefore focused on audience discovery through campaign data.

Phase 01 — Discover

Audience Testing: Tested relevant audience segments around the product's target users and interests. The objective was to identify where the strongest combination of engagement, traffic response, landing-page behaviour, registration activity, and lead quality was emerging.

Creative Relevance: Creative acted as the first major filter between the audience and the funnel. The focus was finding messaging that could make the right audience stop, understand the proposition, and take the next action.

Phase 02 — Validate

Analyse Beyond CTR: A strong click-through rate was treated as an initial signal, not the final answer. Performance was evaluated progressively: *Impression* → *Reach* → *Link Click* → *Landing-Page View* → *Registration* → *Qualified Lead*.

Identify Stronger Combinations: Audience, creative and funnel signals were compared to understand which combinations produced more meaningful outcomes.

Reallocate Budget: Budget was progressively directed toward combinations where evidence suggested stronger acquisition potential.

Full-Funnel Meta System (From Impression to Qualified Lead)

1. AUDIENCE — Relevant audience exposed to the campaign

2. CREATIVE — Message and visual designed to capture attention and communicate proposition

3. ENGAGEMENT / CLICK — User demonstrates initial interest through interaction or link click

4. LANDING-PAGE VIEW — User reaches the intended landing experience

5. REGISTRATION — User completes the desired registration action

6. LEAD QUALIFICATION — Lead quality becomes the downstream signal used to evaluate acquisition

THE KEY STRATEGIC SHIFT

A cheap click is not necessarily a valuable outcome. The objective was to progressively move evaluation from top-of-funnel activity toward qualified acquisition:

Reach → Clicks → Registrations → Qualified Leads

Evaluating the funnel holistically rather than optimising the campaign around a single top-of-funnel metric.

Measurement Stack & Decision Framework (Meta Ads)

Connecting Meta performance to downstream acquisition outcomes and qualified lead quality.

MEASUREMENT LAYERS

- **Meta Ads:** Delivery, reach, impressions, clicks, conversion signals
- **Landing-Page Analytics:** Page views and post-click behaviour
- **Conversion Tracking:** Registration and conversion events
- **Lead Qualification:** Qualified-lead outcomes and quality
- **Business Context:** Verifying meaningful acquisition potential

CORE OPERATING PRINCIPLE

"Meta performance cannot be judged by CTR or CPL alone. The real question is what happens after the click."

Optimisation Decision Log

Signal Observed	Decision Taken	Strategic Rationale
Audience engagement differed across segments	Evaluated audience-level performance	Identify stronger audience-market fit
Creative response varied	Compared creative/message performance	Identify messaging capable of attracting relevant users
Strong link-click activity	Examined landing-page progression	Separate click volume from meaningful traffic
Registrations generated	Evaluated downstream lead outcomes	Understand whether acquisition was translating into useful prospects
Qualified leads emerged	Prioritised stronger lead-generating combinations	Optimise toward business value rather than surface metrics

Results & Acquisition Impact

Measurable Meta acquisition achieved across India & US based on available platform records.

SUPPORTING ORGANIC & SOCIAL IMPACT

Organic Audience Building & Content Distribution at MNF.ai (Distinct from Paid Meta Ads)

Facebook Page Growth

- 2K+ followers added
- 13K+ content interactions
- 36K+ outbound link clicks
- 8K+ organic and paid page visits

Instagram Discovery

- 1.5K+ followers added
- ~345K video views
- ~440K reach
- 5K+ interactions
- 7K+ profile link clicks

Content Distribution

- 800K+ Facebook views (130K+ organic)
- 300K+ Instagram views (100K+ organic)
- 7+ days total watch time generated

KEY TAKEAWAY

Meta Ads generated substantial audience reach and traffic while progressing users through the funnel toward measurable registrations and qualified leads.

The key learning was that reach and clicks are only the beginning of the acquisition journey. Audience relevance, creative response, landing-page behaviour and downstream lead quality need to be evaluated together.

My Meta Ads Operating System

- 01 — **UNDERSTAND:** Business objective, audience, offer, funnel and desired conversion outcome.
- 02 — **DISCOVER:** Identify relevant audiences, creative angles and market opportunities.
- 03 — **BUILD:** Develop campaign structure, audiences, creative and tracking.
- 04 — **MEASURE:** Track reach, impressions, clicks, landing-page views, registrations and lead outcomes.
- 05 — **FORM HYPOTHESES:** Identify the likely reason behind meaningful performance patterns.
- 06 — **TEST & OPTIMISE:** Test audience, creative and funnel variables; learn from the result and reallocate resources.
- 07 — **SCALE:** Increase investment when the evidence supports sustainable acquisition and lead quality.

What This Playbook Demonstrates

Audience discovery · Meta campaign management · Creative-led acquisition · Funnel analysis · Conversion tracking · Landing-page evaluation · Lead-generation strategy · Qualified-lead thinking · Hypothesis-driven optimisation · Budget reallocation · Full-funnel performance analysis · Disciplined scaling

PORTFOLIO SCOPE

Performance figures and campaign results from my work at MNF.ai across India & US are based on available platform records. The ₹1.5L+ Meta Ads spend figure represents verified MNF.ai spend; additional historical spend was managed through older advertising accounts whose records are no longer accessible. The ₹15L+ total ads managed figure (Google Ads & Meta Ads) reflects cumulative career experience. Figures are rounded/approximate based on available data.
