Career Positioning & Professional Experience Snapshot

10–20 Second Recruiter Executive Overview

CAREER STORY & OPERATING PHILOSOPHY

Strategy, Execution & Measurement — Connected

I have 15+ years of overall professional experience, including 6+ years in Digital Marketing across SaaS products, startups, and small businesses. My work connects acquisition channels, user behaviour, conversion tracking, and business outcomes into a cohesive system.

Operating philosophy: Don't optimise for activity — optimise for outcomes.

PROFESSIONAL EXPERIENCE SNAPSHOT

Full-Funnel Ownership Across Channels

- **MNF.ai — Digital Marketing / Performance Marketing:** Owned end-to-end paid acquisition (Google & Meta Ads), technical SEO & website revamp migration, email lifecycle automation at 138K+ scale, and marketing analytics (GA4/GTM/Clarity/PostHog).
- **SaaS, Startups & Small Businesses:** Led full-funnel digital marketing, CRO experimentation, keyword strategy, and customer lifecycle retention.

Capability Framework: What I Own

The Performance Marketing Growth System

1. ACQUIRE

Channels: Google Ads (Search, PMax, Display, YouTube) · Meta Ads · Technical & On-Page SEO · SEM

2. CONVERT

Optimisation: CRO · Landing Page Alignment · Form Friction Reduction · Message Match · Mobile UX

3. RETAIN

Lifecycle: Email Marketing · Lifecycle Automation · Audience Segmentation · PAS Copywriting

4. MEASURE

Tracking: GA4 · GTM Custom Triggers · GSC · PostHog · Clarity Heatmaps · Attribution

Core Performance Playbooks

Four Practical Systems Built from Real Campaign Execution

PLAYBOOK 01 · PAID SEARCH

Google Ads — Full-Funnel Acquisition

Two-phase intent discovery and scaling across Search, Performance Max, Display, and YouTube. Managed ₹3L+ budget, 30.8K+ clicks, 10.5K+ registrations, and 2.8K+ YouTube subscribers.

PLAYBOOK 02 · PAID SOCIAL

Meta Strategy — Performance & Engagement

Full-funnel paid social moving cold attention into actions. Managed ₹1.5L+ budget, 1.42M+ impressions, 9K+ Landing Page Views, 790+ workshop registrations, and 275+ qualified leads.

PLAYBOOK 03 · LIFECYCLE

Email Marketing Engine at 138K+ Scale

Decoupled registered users from cold prospects, hardened DNS (SPF/DKIM/DMARC), dynamic list hygiene, and automated PAS workflows maintaining a 64% open rate and 12% CTR.

PLAYBOOK 04 · ORGANIC & TRACKING

Technical SEO & Analytics Foundation

3-stage website evolution (legacy → revamp → MNF.ai), Screaming Frog crawl audits, 1-to-1 301 redirects, schema markup, CRO, and GA4/GTM attribution recording 149K+ pageviews.

MARKETING TECHNOLOGY STACK

Google Ads (Search/Display/PMax/YT)

Meta Ads Manager

GA4 & GTM

Technical SEO & Schema

Lifecycle Email Automation

Conversion Rate Optimization

Multi-Touch Attribution

Google Search Console

A/B Testing

PostHog Analytics

Microsoft Clarity

SQL & Metabase

Excel / Sheets Modeling

WordPress CMS

Google Ads — Full-Funnel Acquisition

Google Ads Spend: ₹3L+

From Search Intent to Measurable Acquisition across Search, Performance Max, Display & YouTube.

₹3L+ BUDGET MANAGED	30.8K+ AD CLICKS	10.5K+ REGISTRATIONS	2.8K+ YT SUBSCRIBERS GAINED	400K+ EVIDENCED IMPRESSIONS
------------------------	---------------------	-------------------------	--------------------------------	--------------------------------

STAR — Business Context & Objectives SaaS Acquisition under Disciplined Budgets

[S] Situation: MNF.ai, an AI-powered SaaS platform for filmmakers and screenwriters, needed a measurable search-acquisition engine capable of generating qualified registrations under a disciplined starting budget (₹500/day).	[T] Task: Uncover actual screenwriter search intent, transform validated demand into efficient registration opportunities, and continuously improve performance as conversion data matured.
[A] Action: Built a two-phase intent framework: mined real queries using structured Broad Match with tightly themed ad groups, then graduated proven winners into Exact and Phrase match with strict negative keyword hygiene.	[R] Result: Managed ₹3L+ in aggregate Google Ads spend, delivered 30.8K+ targeted ad clicks, recorded 14.1K+ tracked conversion signals across available campaign evidence, and generated 10.5K+ website registrations.

Campaign Scope: One Platform, Multiple Acquisition Objectives Multi-Channel Google Ads Execution

1. Search Acquisition Core focus: intent capture, themed ad groups, match-type graduation, daily Search Terms audits, and negative-keyword lists. Strongest quantitative evidence.	2. Performance Max Conversion signals and campaign performance data supporting acquisition scaling across Search, Display, and Discover via asset group testing.	3. Display & Remarketing Visual remarketing and audience engagement campaigns re-engaging previous website visitors and nurturing drop-offs within the acquisition mix.	4. YouTube / Demand Gen Video-led acquisition and subscriber growth campaigns: 2.8K+ direct YouTube subscribers gained alongside increased brand watch hours.
--	--	---	---

Strategic Framework & Execution Deep Dive Two-Phase Intent Harvesting

DISCOVER (Broad Match Cohorts) → VALIDATE (Search Terms Reports) → OPTIMISE (Negatives + Exact Match) → SCALE (Target CPA Tuning)			
PHASE 01 · INTENT DISCOVERY Mine Real Search Behaviour Understood what filmmakers actually searched for rather than assuming high-volume keywords automatically represented valuable demand. Structured Broad Match: Deployed on long-tail screenwriting themes to discover unmapped search phrasing. Tightly Themed Ad Groups: Isolated intent buckets to maintain ad copy relevance and strong Quality Scores. Negative-Keyword Hygiene: Added 100+ negative entries (e.g., "free download", "movie torrent", "reviews") to eliminate budget leakage.	PHASE 02 · INTENT HARVESTING Concentrate Spend on Validated Intent Once winning keyword signals were identified, moved them into controlled performance buckets designed for efficient registration acquisition. Exact & Phrase Deployment: Isolated proven converters for granular bidding precision without query leakage. Dynamic Allocation: Shifted daily budgets toward top-performing asset groups and high-converting terms. Bidding Evolution: Started at ₹500/day on Maximize Clicks for learning, then shifted to registration-cost optimisation.		

Measurement & CRO: Connecting Paid Ads to On-Page Outcomes Full-Funnel Tracking Infrastructure

AD IMPRESSION → SEARCH INTENT CLICK → RELEVANT LANDING PAGE → STREAMLINED REGISTRATION → GA4 / PRODUCT ACTION	
Creative & Landing Page Alignment Aligned query intent with specific product messaging. Reduced conversion friction by trimming registration form fields, ensuring users landing from ad clicks experienced zero distraction.	Measurement & Attribution Stack Connected ad delivery with downstream outcomes using GA4, Google Tag Manager (GTM), Google Ads Conversion Tracking, Google Search Console, Microsoft Clarity, and PostHog.

Signal-Driven Optimisation Log Evidence-Based Capital Reallocation

SIGNAL OBSERVED	ACTION / DECISION TAKEN	STRATEGIC RATIONALE & OUTCOME
Search Query Irrelevance	Added negative keywords from daily search terms audits	Reduced irrelevant traffic and protected daily budget from non-converting queries.
Validated Search Terms	Extracted high-converting queries into Exact Match ad groups	Increased bidding control and precision around demonstrated commercial intent.
Conversion Data Maturity	Transitioned bidding from Max Clicks to Cost-per-Registration	Moved from initial traffic learning toward acquisition efficiency as signals accumulated.
Mobile Landing Friction	Audited Clarity heatmaps; compressed mobile form to 2 fields	Removed friction between the ad click and signup, improving registration rates.

“Search intent is more valuable than search volume.” — Google Search Ads Strategy for MNF.ai

Meta Strategy — Performance & Engagement

Meta Spend: ₹1.5L+

Turning passive attention into qualified SaaS registrations, workshop attendees, and leads.

₹1.5L+	1.42M+	9K+	790+	275+
BUDGET MANAGED	PAID IMPRESSIONS	LANDING PAGE VIEWS	WORKSHOP REGS	QUALIFIED LEADS

STAR — Business Context & Objectives

Capturing Latent Demand That Doesn't Start with a Search

[S] Situation: MNF.ai needed qualified registrations, workshop conversions, and lead actions from filmmakers who were not actively searching for an AI scriptwriting solution on Google.

[T] Task: Build a disciplined Meta acquisition pipeline capable of converting passive scrollers into landing page visits, workshop attendees, and qualified user leads within startup budgets.

[A] Action: Layered demographic, interest, and creator lookalikes; deployed video script demos, Reels, and carousels; optimized for Landing Page Views (LPVs); and engineered deep pixel feedback loops.

[R] Result: Delivered 1.42M+ impressions, 1.20M+ reach, 28.5K+ link clicks, 9K+ Landing Page Views, 790+ workshop registrations, and 275+ qualified leads within constrained daily budgets.

Meta Campaign Scope: Objectives Across the Funnel

Strategy Beyond Basic Ad Boosting

TRAFFIC · LANDING PAGE VIEWS · LEAD GENERATION · WORKSHOP REGISTRATION · ENGAGEMENT · MESSAGING · PROFILE GROWTH

Performance Acquisition Objectives

Traffic campaigns to drive awareness, Landing Page Views to ensure destination arrival, lead forms for direct capture, and workshop registrations to build qualified buyer cohorts.

Engagement & Brand Distribution

Deploying native video Reels and sponsor partnerships for social proof, direct messaging campaigns for personalized creator interactions, and profile growth campaigns to build organic audiences.

Performance Engine: Audience, Creative & Funnel Architecture

Four Layers of Full-Funnel Acquisition

TARGETING → NATIVE CREATIVE → FRICTIONLESS LANDING → PIXEL FEEDBACK → SCALE

AUDIENCE & CREATIVE ARCHITECTURE

Layering Audiences & Native Formats

Moved cold audiences from passive attention to interest with tailored creative formats and behavioral targeting.

- **Audience Layering:** Combined filmmaker demographics, screenwriting software interests (Final Draft, Celtx), and creator lookalikes.
- **Native Formats:** Dynamic 9:16 vertical Reels, video scriptwriting walkthroughs, native carousels, and sponsored creator posts.
- **Placement Testing:** Tested performance across Facebook Feeds, Stories, and Instagram Reels to optimize budget allocation.

LANDING & MEASUREMENT ARCHITECTURE

LPV Optimization & Pixel Feedback

Prevented click drop-off by tightening mobile landing UX and feeding verified conversion events back to Meta.

- **Landing Page Views (LPVs):** Optimized for users who actually loaded the page, filtering out accidental taps and bot clicks.
- **Mobile UX:** Fast mobile loading, top-of-fold CTAs, and minimal registration fields to reduce form friction.
- **Measurement Stack:** Meta Pixel feedback loops, GTM UTM tracking, GA4 broader website context, and Clarity/PostHog session analysis.

Supporting Social Growth & Content Distribution (Separate from Paid Ads)

Organic Audience Building & Video Distribution

Facebook Page Growth

2K+ followers added, 13K+ content interactions, 36K+ outbound link clicks, and 8K+ organic and paid page visits.

Instagram Discovery

1.5K+ followers added, ~345K video views, ~440K reach, 5K+ interactions, and 7K+ profile link clicks.

Content Distribution

800K+ FB views (130K+ organic), 300K+ IG views (100K+ organic), and 7+ days total watch time generated.

“Don't optimise the ad. Optimise the system around the ad — aligning audience relevance, creative formats, mobile landing experience, and pixel feedback.”

— Meta Ads Strategy for MNF.ai

Email Marketing Engine at 138K+ Scale

Audience: 138K+ Profiles

Turning a large database into an engaged, high-converting lifecycle system.

138K+ AUDIENCE PROFILES	64% AVERAGE OPEN RATE	12% AVERAGE CTR	<2% BOUNCE RATE
----------------------------	--------------------------	--------------------	--------------------

STAR — Business Context & Deliverability Problem

Scaling Communication Without Sacrificing Reputation

[S] Situation: MNF.ai had a combined audience of 138K+ profiles containing two fundamentally different groups: 13K+ registered filmmakers and 125K+ cold prospects. Large-scale sends introduced deliverability and reputation risks.

[T] Task: Build an email architecture to decouple user groups, establish institutional deliverability, automate lifecycle nurture journeys, and generate measurable engagement without spam filtering.

[A] Action: Decoupled registered users from cold prospects; hardened DNS with SPF, DKIM, and DMARC; cleaned lists with Bouncify; set up automated warm-ups; and used Problem–Agitate–Solution (PAS) copy.

[R] Result: Sustained engagement across both cohorts, achieving a 64% average open rate, 12% average CTR, and keeping bounce rates strictly below 2% across automated journeys and broadcast sends.

Lifecycle & Deliverability Architecture

Four Operational Layers

SEGMENT → AUTHENTICATE (SPF/DKIM/DMARC) → AUTOMATE (PAS Journeys) → MEASURE → OPTIMISE

AUDIENCE ARCHITECTURE

13K+ Registered Users vs. 125K+ Cold Prospects

Separate audience paths around user intent, preventing deliverability dilution.

- 13K+ Registered Users:** Dedicated transactional pipelines receiving onboarding, feature drops, workshops, and tutorials.
- 125K+ Cold Prospects:** Problem-centric nurture tracks with zero hard sales on first touch to build trust.
- Dynamic Verification:** Scrubbed invalid mailboxes via Bouncify API before deployment.

DELIVERABILITY FOUNDATION

Domain Trust & Authentication Protocol

Technical trust controls established before scaling volume.

- SPF & DKIM:** Authorized IP blocks and 2048-bit cryptographic header signing.
- DMARC Configuration:** Enforced domain alignment and monitored Google Postmaster delivery.
- Automated Warm-up:** Ramped sender reputation via Instantly AI and Snov.io.

Lifecycle Journeys & Automation Trigger Logic

From Campaigns to Automated Journeys

ONBOARDING → ACTIVATION → NURTURE → RE-ENGAGEMENT → RETENTION

1. Delivery Stack

Amazon SES, Brevo & Mailchimp: Scalable transactional and bulk SMTP infrastructure with dedicated sending IP allocation.

2. Workflow Orchestration

Kestra & Google Sheets: Advanced event-triggered routing keeping lead flows and user journey steps synchronised.

3. PAS Copywriting

Problem–Agitate–Solution: Framing screenwriter pain points empathetically; screened against 400+ spam triggers.

Email Performance & Optimisation Decision Log

Signal-Driven System Adjustments

SIGNAL OBSERVED	ACTION / DECISION TAKEN	STRATEGIC RATIONALE & OUTCOME
Blended Cohort Sending	Decoupled registered users from cold prospects	Tailored messaging relevance; protected sender reputation and restored open rates.
Cold Sending Risk	Hardened SPF/DKIM/DMARC and ran mailbox warm-ups	Built technical trust with mailbox providers before scaling outreach volume.
Risky Address Bounces	Integrated pre-send Bouncify list verification	Removed invalid and disposable emails; maintained bounce-rate target below 2%.
Corporate Copy Drop-off	Switched to minimalist, plain-text style with PAS copy	Increased recipient engagement and achieved a 12% average click-through rate.

“Deliverability is just as critical as creative copy. Domain hygiene and authentication are the unseen drivers of email conversion success.”

— MNF.ai Email Marketing Strategy & Automation

Technical SEO & Analytics Foundation

MNF.ai Platform Data

Building a search-ready website foundation and reliable measurement system before scaling traffic.

149K+ TOTAL PAGEVIEWS	65K+ ACTIVE USERS	75.7K+ SEARCH IMPRESSIONS	1.78K+ SEARCH CLICKS	8.8 AVERAGE POSITION (GSC)
--------------------------	----------------------	------------------------------	-------------------------	-------------------------------

SEO Across the Website Lifecycle: Three-Stage Evolution From Legacy Web Presence to Revamped MNF.ai

01. LEGACY WEBSITE → 02. REVAMP & DOMAIN TRANSITION → 03. MNF.ai REDESIGNED PLATFORM		
01 · LEGACY WEBSITE mynextfilm.com → mynextfilm.ai Built SEO foundation on the legacy presence: technical SEO audits, on-page optimization, search intent research, and initial organic growth work.	02 · REVAMP & TRANSITION mynextfilm.ai → MNF.ai Built a technically sound SEO foundation for migration: 1-to-1 301 URL mapping, canonicals, robots.txt, XML sitemaps, JSON-LD schema, and UX/CRO improvements.	03 · MNF.AI REDESIGN Revamped Platform Continued SEO and measurement: Google Search Console, GA4 & GTM custom events, behavioral analytics via Clarity/PostHog, and conversion path tuning.

Measurement Integrity Note: Quantitative SEO results shown here are based on the available data in the current MNF.ai Google Search Console Domain Property. Historical GSC records from the previous domain are not available.

STAR — Technical Foundation & Migration Deep Dive Defensible Technical Architecture

[S] Situation: MNF.ai was evolving from its legacy web presence to a redesigned website and new domain, creating the need for a technically sound search foundation and better user experience.	[T] Task: Build a technically sound SEO foundation, address migration risks through URL mapping, align content with search intent, improve UX/CRO, and establish reliable analytics.
[A] Action: Used Screaming Frog crawls, validated canonical paths and metadata, implemented schema and 301 redirect rules, mapped search intent, configured GSC/GA4/GTM, and instrumented behavioral tracking.	[R] Result: The revamped MNF.ai site established measurable visibility and engagement: 75.7K+ search impressions, 1.78K+ search clicks, 149K+ pageviews, and 65K+ active users in available records.

Complete Tool Stack Across Research, Technical SEO & Measurement Tools Connected to Work Enabled

1. SEO Research & Intent Ahrefs · Ubersuggest · WordStream: Keyword research, search intent mapping, topic clusters, and organic discovery analysis.	2. Technical SEO Foundation Screaming Frog · XML Sitemaps · Robots.txt · Schema: Crawl audits, canonicals, 301 redirects, and Organization/FAQ JSON-LD structured data.	3. Analytics & CRO GSC · GA4 · GTM · Microsoft Clarity · PostHog: Measurement tracking, dataLayer events, session recordings, heatmaps, and CRO testing.
---	--	---

CRO & UX: Connecting Search Intent to Landing Experience Search Intent → Landing Experience → Behaviour → Conversion

INFORMATION HIERARCHY & INTENT MATCH Landing Experience Alignment SEO brings the visitor; UX moves them forward. Aligned search intent with landing page hierarchy, positioning key product capabilities and clear CTAs above the fold to minimize drop-off.	BEHAVIOURAL ANALYSIS & FRICTION REDUCTION Clarity & PostHog Optimisation Used Clarity session replays and PostHog user cohorts to identify mobile navigation friction, eliminate dead clicks, and streamline signup forms for organic visitors.
--	---

SEO & Growth Diagnostic Framework Empirical Diagnostic Pathways

DIAGNOSTIC SYMPTOM	ROOT CAUSE ANALYSIS	PRESCRIBED STRATEGIC ACTION
Crawl / Indexation Lag	Technical architecture, robots.txt, canonical conflicts	Audit GSC Coverage report, validate canonical paths, update XML sitemaps.
High Imp. / Low Clicks	Low SERP CTR due to snippet copy or intent mismatch	Rewrite meta titles & descriptions with clear benefits; deploy FAQ schema.
Traffic / Low Signups	Landing-page UX friction, slow load speed, or mismatch	Audit Clarity heatmaps to diagnose mobile friction; streamline signup forms.
Attribution Discrepancy	Inconsistent UTM taxonomy or untracked events	Enforce strict UTM naming conventions and unify events inside GTM and GA4.

“SEO isn’t just about rankings. It’s about making the right information discoverable, understandable and actionable — then measuring what happens after the click.”

— Technical SEO & Analytics for MNF.ai
