

Executive Summary

Performance-focused digital marketer with 6+ years of hands-on experience across Google Search Ads, Meta Ads, Technical SEO, Email Marketing Infrastructure, and End-to-End Analytics (GA4, GTM, Clarity, PostHog). Proven track record architecting multi-channel acquisition funnels for high-growth SaaS and AI platforms (notably **MNF.ai**), maximizing user acquisition unit economics under strict, disciplined budget constraints.

Note & Disclaimer: Total ₹15 Lakhs+ Paid Ads Budget maintained across Google Ads & Meta Ads. This Portfolio considers the Budget & Period of MNF.ai only. To protect client confidentiality, campaign metrics have been rounded and presented as approximate figures.

Challenge & Strategic Mandate

MNF.ai is an advanced AI SaaS platform for global screenwriters and filmmakers. The mandate was to scale qualified user registrations starting with an initial ₹500/day budget, which was gradually scaled and increased based on performance validation (aggregate ₹3,00,000+ managed) while preventing spend leakage in competitive auctions.

- Intent Decoupling:** Separated broad discovery queries from high-intent transactional search patterns.
- Search-Only Network:** Disabled Display and Search Partners to enforce pure search intent.

Phase 1: Search Intent Discovery

- Broad Match Exploration:** Deployed tightly structured Broad Match ad groups to capture emerging AI filmmaking queries.
- Negative Keyword Hygiene:** Monitored Search Terms Reports daily, adding 150+ negative keywords weekly to filter waste.
- Bidding Kickstart:** Leveraged *Maximize Clicks* to rapidly populate conversion cohort baseline data.

Phase 2: Scale & Unit Cost Optimization

- Match Type Segregation:** Extracted validated, high-converting queries from Phase 1 into dedicated **Exact** and **Phrase Match** ad groups.
- Smart Bidding Migration:** Transitioned to *Target CPA* and *Maximize Conversions* once statistical confidence matured.
- Ad Copy Alignment:** Developed dynamic responsive search ads aligning user search queries with SaaS capabilities.

Conversion Funnel & Friction Reduction

- Single-Step Sign-up:** Streamlined registration form fields to eliminate user drop-offs.
- Clarity & PostHog Validation:** Analyzed session heatmaps to remove UI obstacles on the signup gateway.
- Geography-Based CPC Tuning:** Balanced high-volume India traffic (₹2.58 CPC) with targeted US monetization traffic (₹42.00 CPC).

CAMPAIGN STAGE	BIDDING & KEYWORD STRATEGY	PRIMARY METRIC TRACKED	EXECUTION IMPACT
Phase 1: Discovery	Broad Match + Maximize Clicks + Negative Filters	CTR & Query Intent Quality	Identified top 20 converting keyword themes
Phase 2: Scaling	Exact & Phrase Match + Target CPA	Cost Per Acquisition (CPA)	Reduced blended CPA to ₹13.07
Optimization Stage	Ad variant testing + Landing Page UI audits	Conversion Rate (CVR)	Delivered 10,500+ verified registrations

KEY STRATEGIC TAKEAWAY

"Search advertising efficiency is unlocked when campaign architecture reflects real human search intent rather than vanity search volume. Isolating discovery from conversion exploitation protects unit economics on any budget."

Email Marketing Strategy & Lifecycle Automation

MNF.ai: Building an institutional email framework across 138K+ audience profiles to safeguard sender reputation and drive product adoption.

COLD LEADS ENGAGED

<2% bounce rate via Bouncify

Audience Segmentation & Funnel Decoupling

Rather than sending generic broadcast blasts, the 138,000+ contact database was bifurcated into distinct communication tracks to maintain ultra-high deliverability and relevancy:

- **13,000+ Registered Users:** Automated behavioral onboarding, feature release notifications, script tutorials, and masterclass invitations.
- **125,000+ Cold Prospects:** Value-led outreach educating filmmakers on AI screenwriting efficiencies, mapped through cold-to-warm nurture cycles.

Infrastructure Hardening & Deliverability

- **Authentication Stack:** Configured 100% SPF, DKIM, and strict DMARC enforcement across sending domains to guarantee primary inboxing.
- **Automated Warm-up Cycles:** Deployed Instantly AI and Snov.io with gradual ramp schedules to preserve sender reputation scores.
- **Hygiene Verification:** Filtered all lead cohorts through **Bouncify**, successfully holding overall bounce rates strictly below 2%.

PAS Copywriting & Engagement Architecture

- **Problem-Agitate-Solution (PAS):** Structured email copy around writer's block and screenplay structuring obstacles before positioning MNF.ai.
- **Subject Line Experimentation:** A/B tested curiosity-driven, benefit-first subject lines with strict spam-trigger suppression.
- **Frictionless CTAs:** Single, focused action triggers directing users directly to script generation workflows.

Marketing Automation & Orchestration

- **Hybrid ESP Stack:** Orchestrated transactional runs and newsletters via Amazon SES, Brevo, and Mailchimp.
- **Trigger Automation:** Leveraged Kestra workflows synchronized with Google Sheets databases for automated data routing.
- **Feedback Tracking:** Monitored unsubscribes and spam complaints in real time, instantly suppressing disengaged segments.

EMAIL LAYER	OPERATIONAL FRAMEWORK	TECH TOOLS	MEASURED RESULT
Deliverability	SPF / DKIM / DMARC setup + continuous warmups	Instantly AI, Snov.io	99.2% Inboxing Rate
List Hygiene	Automated batch cleaning & invalid address purging	Bouncify	< 2.0% Bounce Rate
User Nurture	Behavioral lifecycle triggers & product update drops	Brevo, SES, Mailchimp	64% Avg Open Rate
Prospect Activation	PAS cold sequences & masterclass registrations	Kestra, Google Sheets	12% Avg CTR

KEY STRATEGIC TAKEAWAY

"Email deliverability is as foundational as creative copywriting. Without rigorous domain authentication, list hygiene, and segmented relevancy, even the best creative offers end up in the spam folder."

Meta Ads Full-Funnel Social Acquisition Strategy

MNF.ai: Driving qualified user registrations, workshop conversions, and community pipeline growth via demographic, interest, and behavioral targeting.

High-value qualified pipeline

Targeting Unconscious Need on Social Feeds

Unlike Google Search where users have clear transactional intent, Meta Ads target passive attention. Success required creating scroll-stopping hooks framing creative pain-points:

- **Audience Layering:** Combined filmmaker demographics with behavioral markers (screenplay software users, indie directors, authors, AI creators).
- **Pixel Optimization Loops:** Fed downstream event triggers (workshop signups, app registrations) back into Meta's AI bidding algorithms.

Multi-Format Creative Architecture

- **Video Script Demos & Reels:** Showcased real-time script generation speed to instantly establish SaaS product utility.
- **Native Carousel Cards:** Displayed before-and-after workflow comparisons for narrative development.
- **Event Promo Creatives:** Positioned free live masterclasses as low-friction entryways into the product ecosystem.

Mobile Landing Experience & CRO

- **Landing Page Views (LPVs) vs Clicks:** Optimized Meta delivery specifically for Landing Page Views to eliminate accidental click waste.
- **Sub-2s Mobile Loading:** Streamlined assets for mobile viewports (90%+ of total social traffic).
- **Top-of-Fold CTAs:** Placed frictionless signup buttons and benefit bullet-points directly in the primary screen viewport.

Disciplined Budgetary Execution

- **Initial ₹100 to ₹500 Daily Budgets:** Started with an initial ₹100 to ₹500/day testing budget, which was gradually scaled and increased based on performance validation.
- **Placement Optimization:** Automated multi-placement testing across Instagram Feeds, Reels, and Stories to secure lower blended CPMs.
- **Clarity Drop-off Audits:** Identified UX bottlenecks to ensure inbound clicks converted into active community members.

FUNNEL LEVEL	CAMPAIGN OBJECTIVE & FORMAT	TARGETING STRATEGY	CORE METRIC ACHIEVED
Top of Funnel (TOFU)	Awareness & Video Views (Reels / Demos)	Broad Interest + AI Screenwriting	1.42M+ Impressions
Middle of Funnel (MOFU)	Traffic & Landing Page Views (Carousels)	Engaged Viewers + Filmmaker Behaviors	28.5K Clicks (9K LPVs)
Bottom of Funnel (BOFU)	Leads & Event Signups (Custom Forms)	Pixel Retargeting + High-Intent Custom	277 Leads / 792 Workshop Regs

KEY STRATEGIC TAKEAWAY

"Social advertising performance depends entirely on bridging the gap between ad creative and landing UX. High click volume is meaningless unless mobile load speed and registration friction are ruthlessly optimized."

Technical SEO & Measurement Foundation

Preserving Domain Authority During Revamp

Website revamps carry high organic risk (broken paths, orphaned pages, index drops). For MNF.ai's major relaunch, a technical pre-launch and post-launch auditing framework was deployed:

- **Automated Crawl Audits:** Deep Screaming Frog crawls resolving 404s, redirect chains, and sitemap bugs.
- **301 Mapping Matrix:** Preserved legacy platform equity with systematic 301 redirects for indexing paths.
- **Canonical Architecture:** Self-referential canonical tags to prevent duplicate parameter indexing.

Structured Data & Content Mapping

- **Schema Deployment:** Custom JSON-LD schemas (Organization, FAQ, SoftwareApplication).
- **Intent Keyword Mapping:** GKP, Ahrefs, and Gemini to identify high-intent search queries.
- **Heading & Meta Structure:** Semantic H1-H6 hierarchies and compelling meta titles/tags.

Modern Measurement Stack & Attribution

- **Tag Deployment:** GTM containers to handle custom event triggers without developer bottlenecks.
- **GA4 Custom Conversions:** Tracked micro-conversions (script start, export clicks) and macro sign-ups.
- **Ad Pixel Routing:** Verified Google Ads Enhanced Conversions and Meta CAPI/Pixel firing consistency.

Behavioral Tracking & UX Diagnostics

- **Microsoft Clarity Heatmaps:** Analyzed scroll-depth, dead clicks, and rage clicks to optimize UI.
- **PostHog Product Analytics:** Monitored feature retention and cross-session user journey funnels.
- **GSC Performance Monitoring:** Monitored search query rankings, indexation status, and Core Web Vitals.

TOOL PLATFORM	IMPLEMENTED APPLICATION TASK	KEY OUTPUT & TRACKED METRICS
Screaming Frog	Deep site crawls, redirect diagnostics, duplicate content elimination	0 broken links, 100% canonical alignment
Google Search Console	XML sitemap submission, Core Web Vitals audits, search query tracking	75.7K impressions, 8.8 Avg Position, 2.3% CTR
GA4 & GTM	Custom event tracking, behavioral cohort analysis, UTM campaign tracking	149K+ pageviews, 65K+ active users, 72K+ new users
Microsoft Clarity & PostHog	Session replays, scroll heatmaps, UX drop-off and friction analysis	Frictionless onboarding, 2.2K+ returning user cohort

KEY STRATEGIC TAKEAWAY

"Search visibility is not about gaming algorithms—it is about presenting structured, fast, and authoritative answers to user intent. When technical crawlability and analytics measurement are built right from Day One, sustainable organic scale is guaranteed."

Portfolio Analytics & Tracking Infrastructure

Live Measurement Stack Hosted & Validated on monkissilent.github.io

Portfolio Measurement Architecture & Rationale

The portfolio website hosted at monkissilent.github.io is built to showcase hands-on Performance Marketing experience across Google Ads, Meta Ads, Email Marketing, Technical SEO, and Analytics. Rather than presenting theoretical claims or static case studies, this portfolio demonstrates working knowledge and actual execution of marketing technology, analytics, tracking, and measurement.

LIVE TRACKING IMPLEMENTATION ON PORTFOLIO WEBSITE

1. Google Tag Manager (GTM) Container Setup

Rather than hardcoding tracking scripts into site HTML, an institutional **Google Tag Manager (GTM)** container was deployed directly on monkissilent.github.io:

- **GA4 Google Tag Integration:** Centralized Google tag stream routing pageview and session telemetry to Google Analytics 4.
- **Microsoft Clarity Tag:** Embedded native session heatmapping and qualitative replay scripts via custom HTML tag templates.
- **Tag Firing Rules:** Configured DOM-ready triggers to ensure tracking scripts execute with zero impact on page load speed.

2. Behavioral & User Interaction Measurement

- **Navigation & Playbook Clicks:** Tracking user progression and engagement across core case studies and portfolio sections.
- **Scroll-Depth & Attention Maps:** Measuring how deeply recruiters and visitors evaluate individual performance playbooks.
- **Friction Diagnostics:** Detecting dead clicks, rage clicks, and viewport drop-offs via Microsoft Clarity.

3. Quality Assurance via GTM Preview Mode

Rigorous end-to-end debugging and quality assurance were conducted using **GTM Preview & Debug Mode** to verify tracking integrity prior to live publish:

- **Tag Firing Verification:** Confirmed both the GA4 Google Tag and Microsoft Clarity scripts fired successfully on the *Initialization* and *Container Loaded* events.
- **DataLayer Payload Integrity:** Verified that page URLs, referral sources, and custom event variables pass cleanly without dropped packets.
- **Cross-Browser Validation:** Tested firing triggers across Chromium, WebKit, and mobile viewports.

4. Connecting Analytics & Behavioral Insights

- **Real-Time GA4 Stream:** Monitoring visitor cohorts, geographic distribution, and referral channels in real time.
- **Behavioral Session Replays:** Reviewing actual visitor paths to optimize UX readability and content flow.
- **Proof of Execution:** Serves as living proof of hands-on tracking, analytics setup, and performance measurement capabilities.

IMPLEMENTATION LAYER	CONFIGURED TOOL / COMPONENT	VERIFICATION & OUTPUT STATUS
Container Management	Google Tag Manager (GTM)	Active container deployed on monkissilent.github.io
Quantitative Analytics	Google Analytics 4 (GA4 Google Tag)	Verified firing on Container Loaded event in GTM Preview
Behavioral UX Analysis	Microsoft Clarity (Project Integration)	Active heatmaps, scroll-depth, and session recording streams
Tag QA & Debugging	GTM Preview & Tag Assistant	100% successful tag trigger validation with 0 console errors

IMPLEMENTATION TAKEAWAY

"Marketing measurement is only as reliable as its technical implementation. Implementing live GTM, GA4, and Clarity tracking on this portfolio demonstrates end-to-end competency—from tag architecture and QA debugging to data-informed performance analysis."
